

Great Kit for your great business,

Emkit

Throughout the enterprise device's lifecycle, EmKit will be with you to increase your business outcome and improve productivity.

You can meet easy development, simplified management, efficient work routine with EmKit.

Development

Develop faster and less costly with SDK and development kit.

Develop-

ment

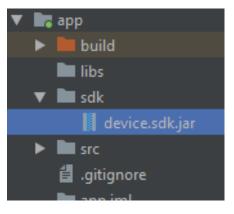

Optimized Software Development

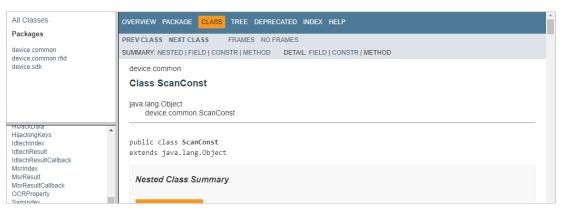

Unified SDK for Android & RFID Development Kit

Unified SDK includes:

- · APIs that control the scanner, SAM, MSR modules, etc.
- Google Generic SDK
- API documentation

Develop the enterprise functions faster and less costly with Development tools provided by **EmKit**.

Management

Provision and manage devices efficiently.

Prevent Distractions: Kiosk Mode

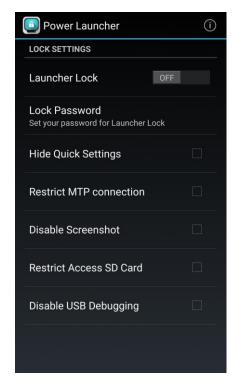

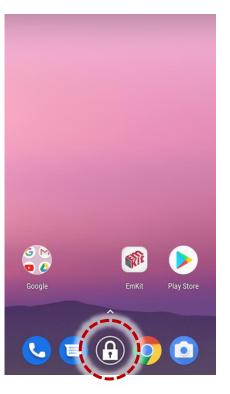

Power Launcher

Implement basic kiosk mode with Power Launcher (Android 8 and below only).

- Restricts some system features
- Locks the users into the home screen the accessible apps are placed

Management

Prevent Distractions: Kiosk Mode

EmKiosk & EmKioskConfig

More expanded and flexible kiosk mode. In addition to the Power Launcher's features, EmKiosk can

- Selects accessible apps
- Allows or blocks system settings & features (screenshot, MTP connection, etc.)
- Screen lock

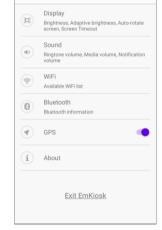

EmKiosk can be configured by PMDM/Scan2Stage (PC Tool) or EmKioskConfig (Android app).

EmKioskConfig provides intuitive UI and it helps you make all **EmKiosk** configurations easily using a single device. And the configuration can be deployed to nearby devices fast using **Direct Clone**.

EmKioskConfig

EmKiosk

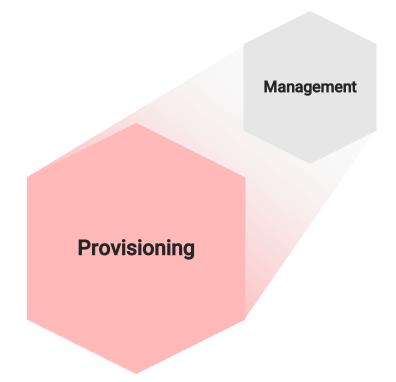

Handy Provisioning for Fast Deployment

Develop Provisioning Solutions

for Customer Satisfaction

Management

Provisioning is an essential step for enterprise devices.

Point Mobile has developed provisioning solutions for easier & faster process.

During this development, we always listen to VoC (Voice of Customer).

Handy Provisioning for Fast Deployment

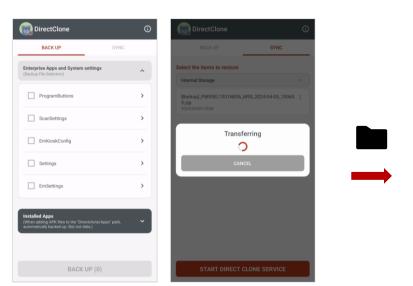

Direct Clone

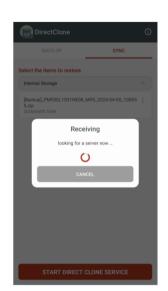

Direct Clone is a powerful way to provision devices in close range without an internet connection.

- 1. Configure the desired settings on a master device.
- 2. Make a backup file.
- 3. Run **Direct Clone hotspot** to make the device act as a local server. The server transfers the backup file to nearby client devices and they restore automatically.

Management

Client Devices

Restriction of **Direct Clone**

- Same Place
- Same OS & Same PN

Handy Provisioning for Fast Deployment

Scan2Stage & Scan2Set

Task Schedule

■ 1. APPLY_SETTING : {...}

■ 2. APPLY_WEDGE_PROFILE : {...}

JobList : [...]

system_config:{

Removed Direct Clone restrictions and expanded the configuration coverage.

900

Using Scan2Stage, you can easily configure the device settings and generate secured QR code with no programming knowledge. Your devices will complete the provisioning process automatically by simply scanning the QR code with Scan2Set.

Scan2Set

Profile Configurations

- · Device and scanner settings
- Enable or disable GMS packages
- · Perform OS update
- · Install & launch applications
- Restrict system features
- · Define keypress behavior
- Configure EmSolutions (EmKiosk, WedgeProfiler, etc.)

Management

Management after Deployment

PMDM

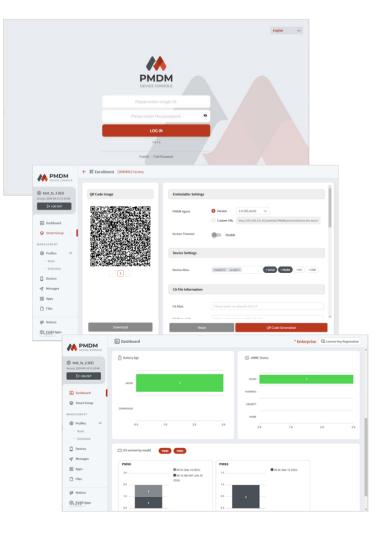

PMDM

Experience efficient management of the deployed devices.

The enrolled devices are synced through **PMDM** server and ready to receive a message from the administrator.

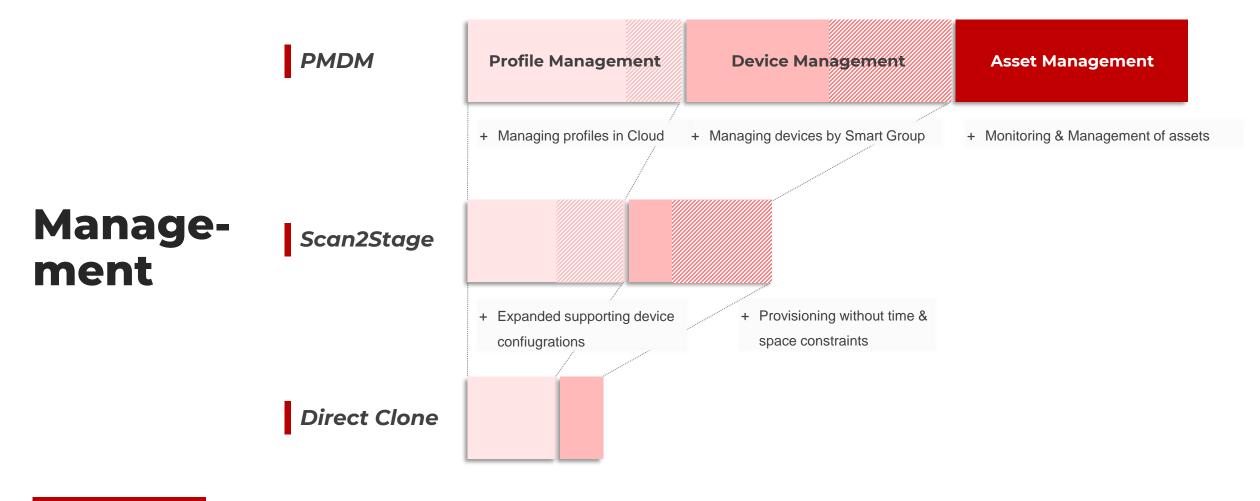

PMDM provides visibility of the device health so that you can foresight the replace time and prevent interruption.

Management

Provisioning Solutions

Management after Deployment

Manage Device Lifetime: PULS

Keep the devices up-to-date and secured for 7 years after product launching.

PULS provides new OS and security patches through FOTA (Firmware Over The Air).

So you can download from anywhere if you can connect to the network.

Management

- 1. Security Patches
- 2. System Update and Upgrade

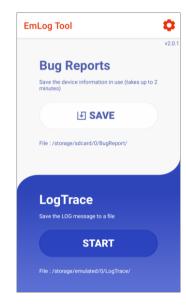

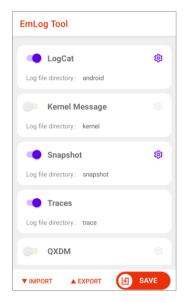

EmLogTool /LogTrace

Integrated Logging Solution: EmLogTool, LogTrace

Take the log to analyze the issue you have.

EmLogTool/LogTrace provides centralized control of taking various types of log.

Management after Deployment

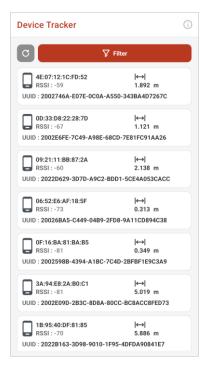

Device Tracker

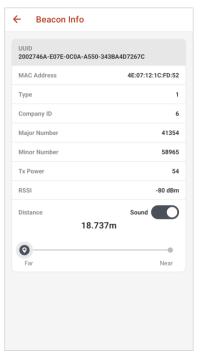

You can find a device lost or not in the proper location.

Device Tracker will list up the beacon signal embedded on the devices.

Select one signal and track the device following a beep sound indicating the distance.

Management

Check if your device supports beacon-related features.

Productivity

Recognize Device status and optimize devices for your work to increase productivity.

Monitor the Device Health

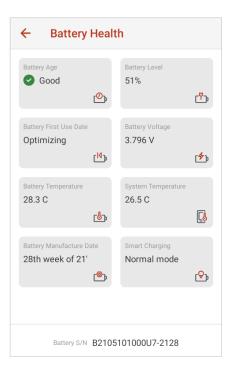

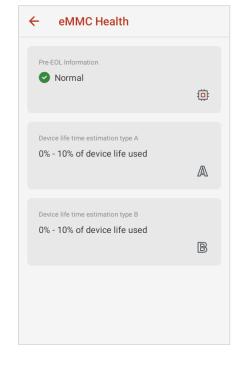

EmHealthReport

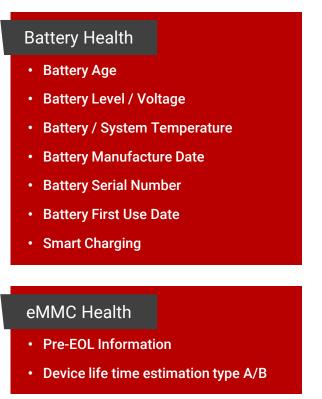

EmHealthReport

Keep monitor the device status to predict when the device need to check. Then the device downtime can be minimized.

EmHealthReport provides intuitive information of battery and eMMC to help you easily identify the device health and when they need to be charged or replaced.

Monitor the Device Health

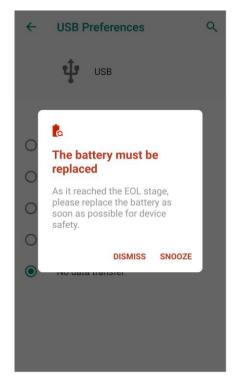

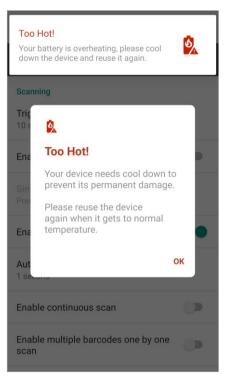

EmBatteryMonitor

EmBatteryMonitor informs the device user that the battery needs actions.

- · Bad battery lifespan
- Battery overheat

The users can take action immediately or report to admin quickly based on the app's notification.

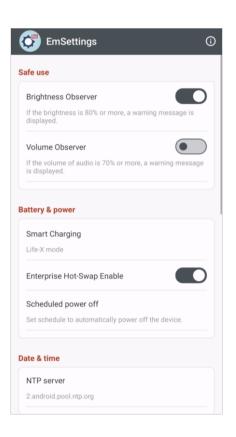

Customize Device to suit your Work

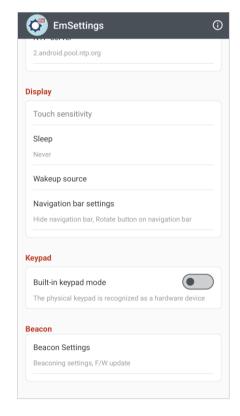

EmSettings

EmSettings contains various Point Mobile exclusive settings related to the Battery, Keypad, or Beacon, etc. Increase your productivity with the enterprise-optimized features.

Productivity

Supported Settings

- · Brightness & Volume Observer
- · Scheduled Power Off
- Smart Charging
- Navigation bar settings
- Keypad settings
- Beacon settings

Customize Device to suit your Work

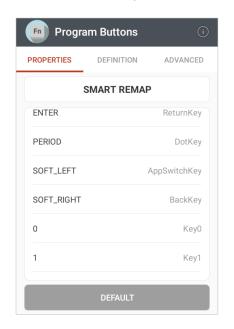

Program Buttons

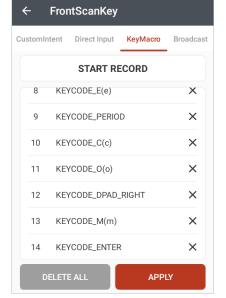

Mapping HW Buttons: Program Buttons

Program Buttons provides button-related features such as key mapping with rich pre-assigned functions, preventing mispressing the power button, and applying KCM file.

Tip) SMART REMAP feature helps you find the button you want easily just by pressing the button.

On PM351 & PM451, you can also customize the symbol grid of the symbol button.

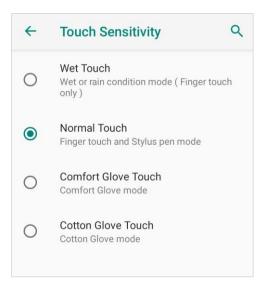

Customize Device to suit your Work

Even in Rain or Wearing Gloves: Touch Sensitivity

Ability to adjust the touch sensitivity level. Just choose one by your work environment.

- Work with wearing gloves -> Glove touch (Increase sensitivity for smooth touch action)
- Work in high humidity -> Wet touch (Decrease sensitivity for preventing unintended touch)

The touch sensitivity options depends on the model.

Take Full Advantage of Data Scanning

ScanSettings

ScanSettings

Manage the settings about scanner in **ScanSettings**.

You can enable/disable the features such as illumination, auto scanning, symbologies, etc. and also can set following features.

TouchScan

Place the virtual scan button on the screen and tap the button to read a barcode instead of the hardware button.

The virtual button provides flexibility of capturing action.

Productivity

MultiScan

MultiScan

Regardless 1D or 2D, you can scan multiple barcodes with a single triggering.

With MultiScan, you can improve efficiency by eliminating time-intensive process of scanning each one individually.

PEW (Powerful Extended Wedge)

Customize the barcode data style to be transmitted.

PEW

Meet flexible data requirements such as changing a specific part of data or adding some string.

Multiple Wedge Profiles, Multiple Apps

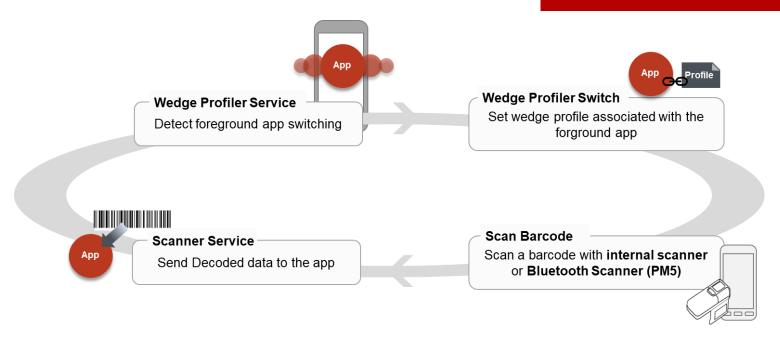

WedgeProfiler

In the use case of using multiple work apps on a single device, each app can take its own data capture rule using **WedgeProfiler**.

While an app is running, the system delivers the scanned data using the wedge profile associated with the app instead of the global settings.

Major Strength of WedgeProfiler

- Easy making the wedge profile and associating apps
- Provides seamless profile switching with real-time checking of foreground app
- Massive deployment using PMDM or Scan2Stage
